

Exercise:

Create a new App Module that consume data from existing Hydra App.

Pre Condition:

- Install Hydra App on the Device

Acceptance Criteria:

- Build screen like shown below
- Use API provided by AIDL-Service (hydraapi) module

Screen:

- Get Group Data -> api. findByType(„DWGroup“)
- Badge count depends on available TaskItems for this Group
- Get TaskItems for selected DWGroup -> api.findByTypeAndItemType(„TaskItem“, DWGroup.itemType)
- Icon Mapping is not a part of this exercise use default icon (uicommon.wg_neu.xml) for all items
